

Lab 5

If – else Statement

Name-Surname.....Student No.....Section (LAB).....

Lab instruction

1. Open VS code or JAVA IDE on your computer.
2. Create a new java class name TestScore.java, then write the following code.

```
import java.util.Scanner;

public class TestScore {
    public static void main(String[] args) {

        Scanner input = new Scanner(System.in);

        System.out.print("Enter Score: ");
        int score = input.nextInt();

        // Test the score if over or equal 80
        if (score >= 80)
            System.out.println("You are passed");

        // the score is not over or equal 80
        else
            System.out.println("You are fail");
    }
}
```

The program will test the number of scores. If the score more than or equal 80, the program will print “You are passed”.

Else, The program will print “You are fail”.

We can draw a flow chart in the diagram below.

3. Compile and run the program.
4. Write a Java program to compute and display a person's weekly salary as determined by the following specification:

If the hours worked are less than or equal to 40, the person receives \$8.00 per hour; else the person receives \$320.00 plus \$12.00 for each hour worked over 40 hours.

The program should request the hours worked as input and should display the salary as output.

*****CHECK POINT #1*****

5. Write a Java program that asks the user to input two numbers. After your program accepts these numbers using Scanner class, have your program check the numbers.

If the first number entered is greater than the second number, print the message *"The first number is greater than the second"*, if second number greater than first number print the message *"The first number is no greater than the second"*. Else, print the message *"These two number are equal"*.

*****CHECK POINT #2*****

6. Write the program to convert the temperature Fahrenheit to Celsius or Celsius to Fahrenheit. The program shall receive the input from user to choose the formula in the table below. Use the GUI to receive the input and show output on screen.

input	Formula
c	$^{\circ}\text{C} = (^{\circ}\text{F} - 32) \times \frac{5}{9}$
f	$^{\circ}\text{F} = \frac{9 \times ^{\circ}\text{C}}{5} + 32$

*** challenge scenario – user may input the upper case letter.

*****CHECK POINT #3*****
